Waterproof TV's 17" & 19"

The TV is a waterproof fully independent television with an inbuilt Free to Air digital tuner as well as a conventional analogue multi region tuner. It features a 17/19 inch widescreen heated LCD panel to avoid misting in bathrooms and is finished in an attractive stainless steel with a choice of finishes and colours.

The TV may be installed in any new or existing Bathroom or Kitchen, in fact any location either residential or commercial including hotel bathrooms, spa rooms and even swimming pools.

The TV's are supplied with everything required including a water resistant remote control, model 17EA* with two 6" waterproof ceiling speakers. Fixing screws, 5 metre cabling, model 17EA0 & 17IA0 with a low voltage power supply, and fitting / operating instructions. It may be tuned to all digital Free to Air television & radio channels via a terrestrial aerial or be connected to Sky, NTL or cable box, VCR, DVD, PC or other device. Moreover it may be connected and viewed in tandem with existing hotels, clubs or restaurant systems. Clever design of Envirovision means that they are in fact a single complete unit. This has greatly reduced the installation process over other brands since there is no longer a two part installation process including awkward wall brackets, chassis and separate glass. We have eliminated associated problems of the consumer having to seal the glass and problems of dust trapping during and even after installation. In addition the TV's single screen means it heats twice as fast as other televisions eliminating possible misting and fogging more quickly.

There are two types of models, both of which are designed to meet the safety requirements for wet areas including bathrooms. Both feature front ingress protection against water jets (IP6X). Models EA have integrated stereo amplifiers which feed two ceiling mounted waterproof speakers, whilst models starting IA have integral front facing waterproof stereo speakers. Once you have decided upon integral speakers or external speakers, the location of your television will determine its electrical safety rating and the specification required. In order to meet current UK and European requirements and laws for installation into wet areas, and for your safety and the safety of others, the correct selection is critical.

*Versions ending with 0 are for locations in zones 1 and above. e.g. 17EA0

*Versions ending 1 are for location in Zones 2 and above and must never be fitted into zone 1 locations. e.g. 17EA1

17EA0 17" TV with Ceiling Mounted Speakers

19IA1 19" HDTV with Integral Speakers

The KBSound is perfect in the bathroom.

The KBSound allows you to listen to your favourite radio shows and music, whether your relaxing after a long day or racing around just getting started. We take great pride in our bathrooms - choosing carefully the ceramics, the tiles, the flooring and the accessories. With the KBSound in the Bathroom you can listen to your favourite shows with no bulky boxes hanging out of the shower or falling from the window sill... no tacky stick-on starfish and no worries of having appliances in the bathroom. The KBSound radio disappears completely out of the way into the ceiling. No Wires, No Ugly Speakers, No Clutter.
